Practical 3

Title : Creating an Application in SalesForce.com using Apex programming Language.

STEPS TO CREATE AN APPLICATION :

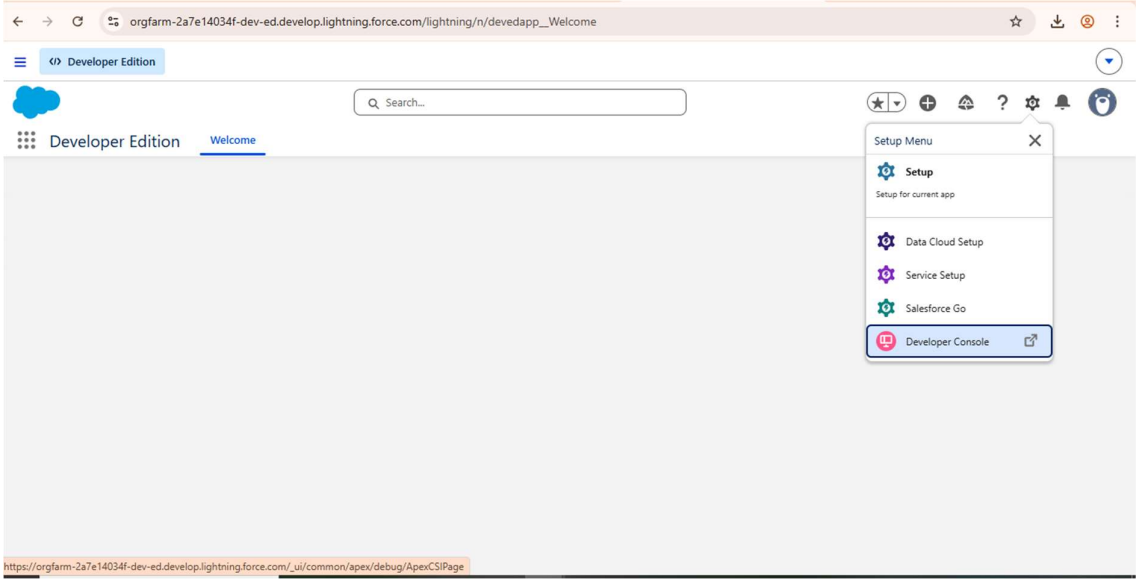
Step 1: Create new org:

https://developer.salesforce.com/signup

Step 2: After signup, logging using following URL

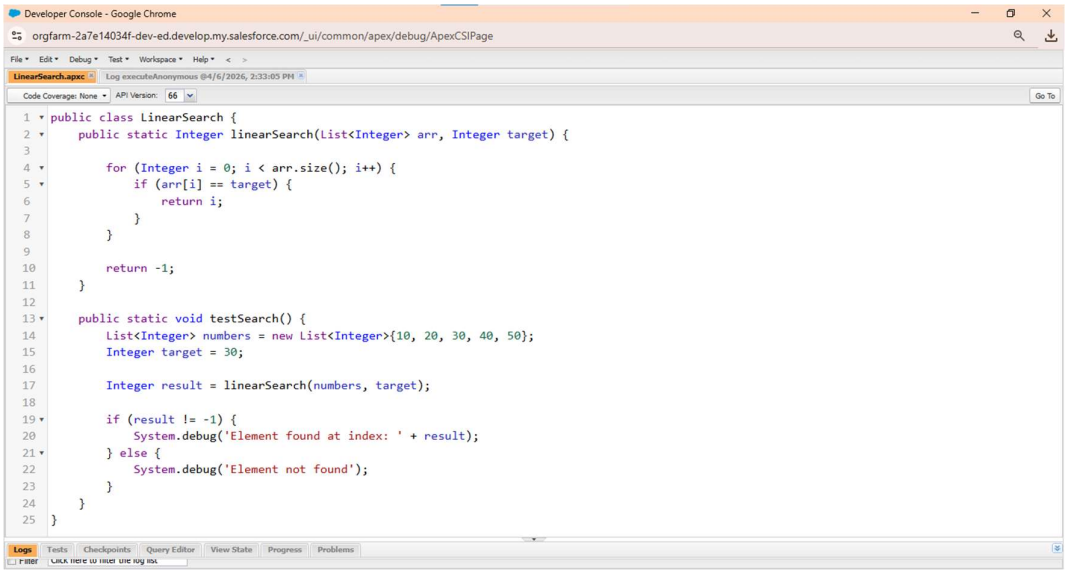
https://login.salesforce.com/

Step 3: Open Developer Console



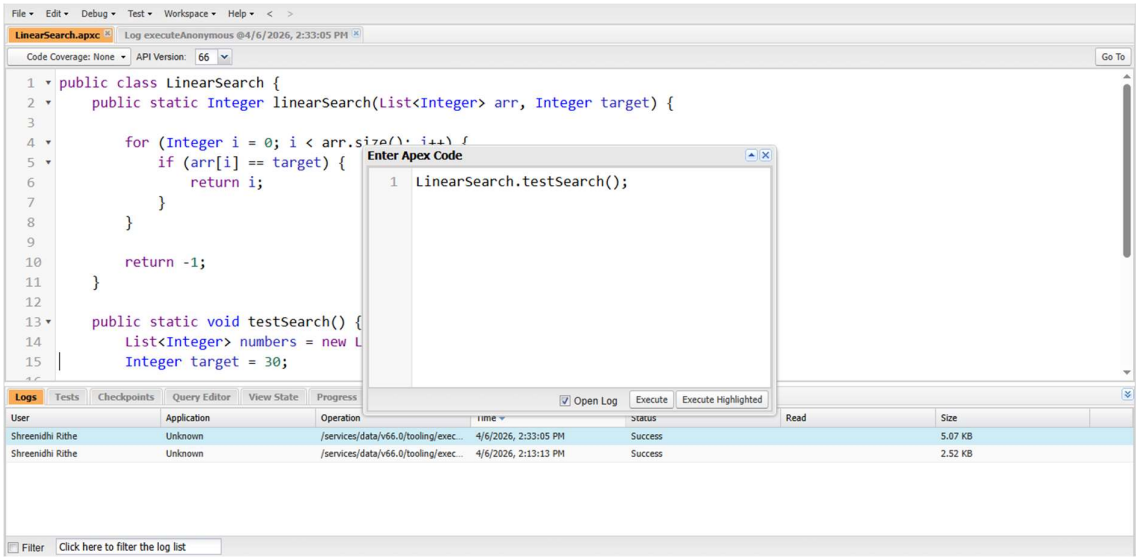
Step 4: Create new Apex Class (File-> New -> Apex Class)

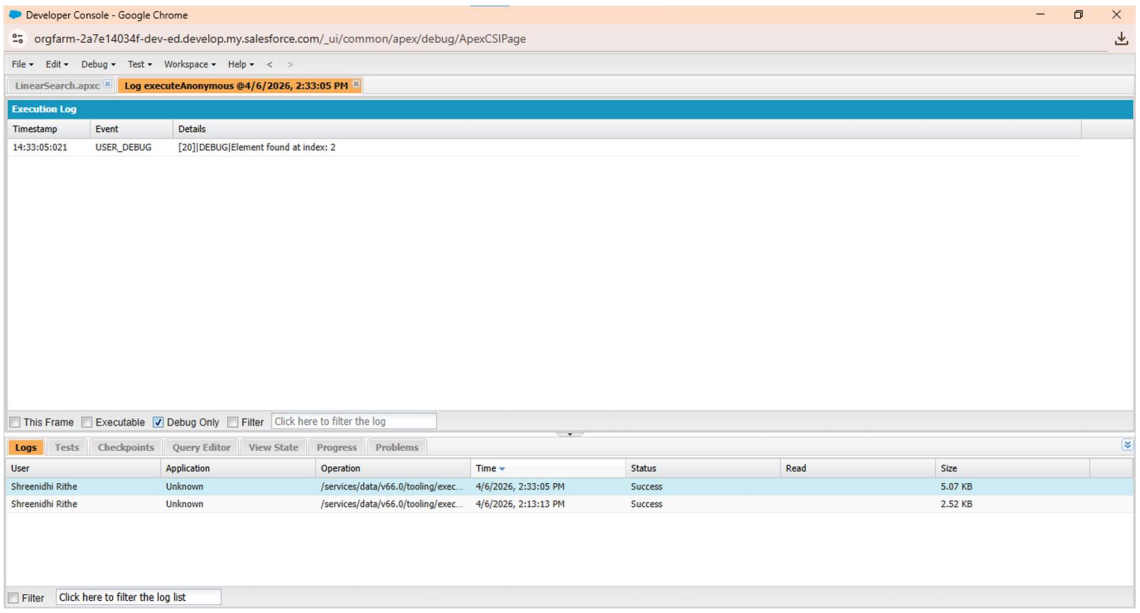
Step 5: Type code to perform Linear Search



```
public class LinearSearch {
    public static Integer linearSearch(List<Integer> arr, Integer target) {
        for (Integer i = 0; i < arr.size(); i++) {
            if (arr[i] == target) {
                return i;
            }
        }
        return -1;
    }
    public static void testSearch() {
        List<Integer> numbers = new List<Integer>{10, 20, 30, 40, 50};
        Integer target = 30;
        Integer result = linearSearch(numbers, target);
        if (result != -1) {
            System.debug('Element found at index: ' + result);
        } else {
            System.debug('Element not found');
        }
    }
}
```

Step 6 : Debug the code (Debug -> Open Execute Anonymous Window)





Step 7 : Click on Debug Only Checkbox to see the output.
